From Mill Manager,

Huldra Silver Inc. examines the tailings facility on a daily basis, including the west tailings facility adjacent to Stumbles Creek to monitor any land movement in the region. If the Company notices any mass movement it will immediately alert the Ministry of Mining.

Regarding the Recommendations (Section 6.0)

Members of the mill site team will continue to monitor, as part of Huldra Silver's Corporate policy, the tailings facility daily and all parts of the facility are easily accessible by vehicle and by foot. We will write a monthly report that will be kept onsite and at our Vancouver headquarters. In addition, any event that is deemed as critical will be addressed immediately with both internal staff and external engineers. We will remove all trees and large vegetation from slope and crest areas
