Date: November 26th, 2014

From: Kevin Sharman

Re: **Test of Plantsite Tailings Dam Emergency Preparedness and Response Plan**

Quintette has written an Emergency Preparedness and Response Plan for the High consequence Plantsite Tailings Facility. Part of this process involves a test of the plan. A "tabletop" test of the plan was conducted on November 25th, 2014.

A number of findings came out of the test. These are summarized in the table below.

Finding	Planned Action	Timeline for action
There is no list of local contractors to be called for emergency repairs.	Compile list of contractors and equipment that can readily be accessed.	December 2014
Number of personnel on site is limited due to care and maintenance status and may be too low for roadblock staffing, etc.	Contact neighboring mines to establish informal agreements for help in the event of emergencies.	December 2014
A site for a command post needs to be established.	Establish main and alternate command post locations and stock with all relevant plans	December 2014

As noted in the table, all action items from the test will be completed in December 2014.
